## Mooring in the Southern and Argentina ocean basin array

The data I'm collecting is about Mooring and what data it collects.

The data will be collected from the articles I have chosen. They are all on a google doc with my notes for this project.

Four out of five of my articles are about anticyclones and the Argentina and southern ocean basin array. The fifth one is about how the Atlantic oyster is affected by mooring. I will be using cited informations from said articles.

All of my data is public information, I don't need permission to access any of my information. The only people that will be able to edit/ access my data besides myself is Mrs. Degan.

I will use quotations and directly cite it from the article. I will also read the whole area of where I want to use a quote and put what I want to say into my own words.

All of my notes are on a google doc with my articles. Some of my notes are also handwritten.

If we're talking the general sense with keeping my project safe, I will make sure to only share it with you and myself.

One place of data was recorded for 13 months to see the effects of the Atlantic oyster. All was shared and presented with location, salinity, temperature, and depth.

All data will be held in my private google doc. That will be the data that I have collected from my articles. It is not needed for any permits or access for any of my information that I have collected.

Since my project is mainly been done on google docs I've shared it through there my teacher will also have access once the project is turned in as well.

I would email the author of the articles I'm using for said project.

I am responsible for all of the data that I pick from my articles

My five articles with annotations from them.
