Template: Digital Curation Centre

Project abstract:

The purpose of this research proposal is to investigate the public health issues inflicted on women and children following the period of nuclear testing in French Polynesia, specifically in communities descending from victims of direct impact in the Marshall Islands. This research may give insight into the intergenerational transmission of potential health defects resulting from nuclear exposure, which may aid in creating a humanitarian solution to such a health crisis.

Through a multi method approach involving the analysis of health history and engagement with Marshall Island residents, this research aims to understand the modern implications of radiation exposure on reproductive health.

Prenatal Health in Marshall Islands

This study will collect data from human health records in the Marshall Islands and oral reports of health experiences.

Data will be collected through access to health file systems and conversations with local communities.

Proper contextual evidence and information will accompany the data. Significant geospatial information will be included. All data will be presented in a clear manner, ready for reuse.

The identity of all participants will be concealed and protected. This research may only be conducted with the approval of the World Health Organization and the Community Health Councils of the Republic of the Marshall Islands.

This research will be copyrighted but the data will be available to all.

The data will be stored and backed up into the researcher's google drive.

All information will be fully accessible and copyrighted once published.

Data involving health statistics should be shared for the betterment of health systems or increased funding.

The data set will remain unaltered in its publication format but presentable for reuse.

This data will be immediately shared with the World Health Organization and the Community Health Councils of the Republic of the Marshall Islands through a study publication format.

N/A

The head researcher is responsible for managing the DMP.

A computer is required to collect, store, and analyze data.
