The above plan creator(s) have agreed that others may use as much of the text of this plan as they would like in their own plans, and customize it as necessary. You do not need to credit the creator(s) as the source of the language used, but using any of the plan's text does not imply that the creator(s) endorse, or have any relationship to, your project or proposal

SSW Amorphous Lab Experiments

Types of data produced

Laboratory analysis data will be generated in this project, including visible/near-infrared spectra, thermal emission spectra, X-ray diffraction patterns, and Scanning Electron Microscope images. Physical samples will be created during the experiments.

Data and metadata standards

A description of each experimental run and the instrument used to generate the data will be included with all laboratory data and physical samples.

Policies for access and sharing

The data will be made available following publication.

Policies for reuse, redistribution, and derivatives

Data will be available for free-use and dissemination.

Plans for access to data used in publications

All data resulting from this project will be published and made openly available to the research community through the articles and their supplementary materials, and through a website. Science PI Smith will ensure that all solution chemistry results will be made available in the supplementary materials of published articles in the form of data tables. Science PI Smith and Co-I Kraft will publish VNIR spectra and XRD patterns as csv files in the supplementary materials of published articles. Co-I Kraft will ensure that all SEM images and corresponding EDS data will be archived in the published articles and supplementary materials. Science PI Smith will be in charge of archiving TIR spectra and ancillary data (XRD mineralogy, XRF, etc.) for all of the samples on the ASU Spectral Library website (<http://speclib.asu.edu>). This plan enables long-term preservation of data in the ASU Spectral Library website, which has made TIR spectra and ancillary data (i.e., electron microprobe, XRD, bulk chemical analysis) easily accessible to the public for over a decade.

Plans for archiving and preservation

All data will be archived with the Purdue University Research Repository, which provides an online, collaborative working space and data-sharing platform to support the data management needs of Purdue researchers and their collaborators.
