Long-Term Human-Environmental Influences on Landscape Formation in the Belize-Guatemala Transboundary Area

Roles and responsibilities

My data will be stored in Excel. I will input it into Excel, and back it up onto a hard drive. I will also save the data onto the Lab harddrive so others have access to it.

Expected data

Data will be in Excel. It will include sample depths, dates, and lithologies. Data will be collected in the field as sediment core samples.

Period of data retention

I plan to retain the data used in my research for for 7 years. This includes the two years to complete my master's degree, four years to complete my PhD, and an extra year in case my PhD takes longer than anticipated.

Data format and dissemination

My data will be available through publications. The raw data will not be made available to those outside of collaborators and colleagues in my lab group.

Data storage and preservation of access

The data will be saved for 7 years, digitally, on computers and hard drives. It will be Excel spreadsheets of numbers, recording information related to soil samples.

Additional possible data management requirements

Question not answered.
