Traffic Sign Detection and Recognition

Data Collection

German Traffic Sign Recognition Benchmark, German Traffic sign Detection Benchmark

From this online resourse: http://benchmark.ini.rub.de/?section=home&subsection=news

Documentation and Metadata

Readme files in the folders which give information about the data (images).

Ethics and Legal Compliance

The data is available for public use and citing the respective individuals and website would be sufficient.

The data is owned by institut for neuroinformatik https://www.ini.rub.de/

Storage and Backup

The data would be stored on personal PC or library computer with personal account.

The computer is always password protected and allows login access for the owner only.

Selection and Preservation

The data which stores the information about the program and particular parameters of the models developed must be retained. The program code files also need to be saved for future purposes.

Using Revision control system tools such as GitHub

Data Sharing

Through my Github repository. I would post the project link on my linkedin profile for users to visit the link. The data will be available as soon as the project is completed. The data would be avialable for public use unless some part of code is decided to retain by author.

None

Responsibilities and Resources

Creators and authors of the project.
