# Brazilian aquatic plant data managemen

*A Data Management Plan created using DMPTool*

Creators: Pablo Hendrigo Alves de Melo, marcopivari@yahoo.com.br

Affiliation: Non Partner Institution

Template: Digital Curation Centre (DCC)

ORCID ID: 0000-0003-3004-2984

## Project abstract:

Initiatives directed to manage the information on aquatic plants can subsidize scientific research in different areas, educational practices and political decisions for sustainable management and protection of wetlands and natural resources, as well as reveal gaps of knowledge about aquatic plants and wetlands. Furthermore, this can contribute specifically to consolidate systems of wetland classification in Brazil. The objectives of this work are to present and explore the utilization of the data repository and of the online platform created for the specific management of data upon aquatic plants in Brazil. The data repository of aquatic plants was developed to store in a standardized form the information on records of occurrences of species contemplating: systematics, taxonomy, habit, life form, geographic distribution, hydrographic basin, wetland, bibliographic reference and deposit in herbarium.

# Brazilian aquatic plant data management

## Data Collection

The data repository of aquatic plants was developed to store in a standardized form the information on records of occurrences of species contemplating: systematics, taxonomy, habit, life form, geographic distribution, hydrographic basin, wetland, bibliographic reference and deposit in herbarium.

Herein we present information compiled from scientific publications in the fields of Botany and Ecology, involving regional floras, floristic, phytosociological and limnological studies, that contemplated aquatic plants, in study areas in Brazil.

Thereby, the intention is to generate a mark upon the knowledge formally produced and published on this group of organisms.

To survey scientific publications we accessed sites such as Scielo, Periódicos Capes and Google Scholar, plus virtual libraries, and searched for the term aquatic plants and those considered similar, presented in the previous topic, besides the names and initials of the States of the Brazilian Southeast. Old bibliographies not available online were obtained consulting private libraries, as had been previously done by Thomaz & Bini (2003). We took into consideration complete articles, books, book chapters, doctor theses and master dissertations.

## Documentation and Metadata

Type Information	Field	Description	Levels	References
Record Level	brazilianRegion	Geographic region of Brazil	CO; NE; N; SE; S	this repository
brazilianMacrophyteAccess	Identificador do access of the record of occurrence in the data repository	Sequential number started in 1 in each geographic region (brazilianRegion)	this repository	
basisOfRecord	Basis of record	Fossil_specimen; human_observation; literature; living_specimen; machine_observation; material_sample; observation; preserved_specimen; unknown	<a href="http://rs.tdwg.org/dwc/terms/basisOfRecord">http://rs.tdwg.org/dwc/terms/basisOfRecord</a>

### Ethics and Legal Compliance

Original references must be cited

Original references must be cited

### Storage and Backup

The data will be stored on the MYSQL server.

The data will be kept in CSV format, SQL script, and ODS and XLS worksheets.

The backup files will be copied to three accounts for cloud storage: Google, Dropbox, and Mega.

The data will be shared through the website <https://sites.icb.ufmg.br/macrofitasaquaticas/>

User and password to change data.

Only the curator can change the main database through script in R Language.

All other users insert data into spreadsheets.

### Selection and Preservation

The data will be stored on the MYSQL server.

The data will be updated every six months on the MYSQL server.

### **Data Sharing**
