Plan Overview

A Data Management Plan created using DMPTool

DMP ID: https://doi.org/10.48321/D1PG9D

Title: The impact of globalization on oral health in the Pacific

Creator: Elvis Obiorah - ORCID: 0009-0003-7418-8405

Affiliation: University of California, Berkeley (UCB) (berkeley.edu)

Principal Investigator: Elvis Obiorah

Funder: University of California, Berkeley (UCB) (berkeley.edu)

Template: Digital Curation Centre

Project abstract:

A literature and art review of oral health at the time of European contact and throughout written history and a survey on the oral health quality of native Pacific Islanders today to examine the effects of globalization more specifically the introduction of highly processed carbohydrates and sugars have influenced the oral health of Indigenous Pacific Islanders.

Start date: 04-18-2023

End date: 04-18-2025

Last modified: 05-10-2023

You do not need to credit the creator(s) as the source of the language used, but using any of the plan's text does not imply that the creator(s) endorse, or have any relationship to, your project or proposal.
The impact of globalization on oral health in the Pacific

Data Collection

What data will you collect or create?

Oral health quality
Eating habits
Oral hygiene practices
Personal accounts of changes in time

How will the data be collected or created?

Present-day data will be collected by a team of scholars and Tahitian dentists on a truck offering free dental consultations. Patients being consulted will then be asked if they want to participate in this study, if so they are asked questions orally and given a comprehensive exam analyzing their oral health quality. Historic data will be collected from personal accounts and a literature/art review.

Documentation and Metadata

What documentation and metadata will accompany the data?

Protocol.io for detailed protocols.
Spreadsheets containing cleaned and sorted datasets.

Ethics and Legal Compliance

How will you manage any ethical issues?

Consent will be asked every step of the way of data collection to ensure all participants are willing to have data made public. No identifiable information will be collected unless older participants whose personal accounts are requested want to be named.

How will you manage copyright and Intellectual Property Rights (IP/IPR) issues?

Question not answered.
Storage and Backup

How will the data be stored and backed up during the research?

Data recorded on paper will be transferred to spreadsheets or electronic forms where they can be stored more securely. Collaborators and stakeholders will have access to raw datasets.

How will you manage access and security?

Collaborators will have access to edit raw datasets documents, whereas stakeholders will only have access as viewers.

Selection and Preservation

Which data are of long-term value and should be retained, shared, and/or preserved?

Question not answered.

What is the long-term preservation plan for the dataset?

Question not answered.

Data Sharing

How will you share the data?

Are any restrictions on data sharing required?

Question not answered.

Responsibilities and Resources

Who will be responsible for data management?

Principal Investigator: Kenechi Elvis Obiorah

What resources will you require to deliver your plan?

Tahitian dentists who are going to be paid for their time

A truck for consultations and data collection
Planned Research Outputs

Dataset - "Oral health quality and hygiene practices of native Pacific Islanders on Moorea, French Polynesia"

With consent from participants, data were collected during consultations with Tahitian dentists and compiled to access the oral health quality of each patient. Cavities, gum diseases, severe tooth decay/dead teeth, and gum recession. Diet information was also collected, and separated into two simple categories, a more traditional diet vs a more "Western diet". Of more the western diet, food types were accessed, foods high in refined sugar mainly or not. Then oral hygiene practices were surveyed, the western standard is to brush at least twice a day and floss at least once. Other oral hygiene practices were surveyed aswell: the use of chewing sticks, the use of picks, and the use of salt.

Collection - "A digital collection of art pieces and literature describing/showing oral health quality of Native Pacific Islanders at early contact time."

Art pieces showing oral health quality (full set of teeth) will be compiled into a digital document. A literature review of journals and papers describing oral health quality from missionary/colonists/military accounts during the early contact period of Westerners in the Pacific.
